### E-Sign law-compliant biometric signatures and software

*encryption, compression, and authentication for eCommerce*

## Applications

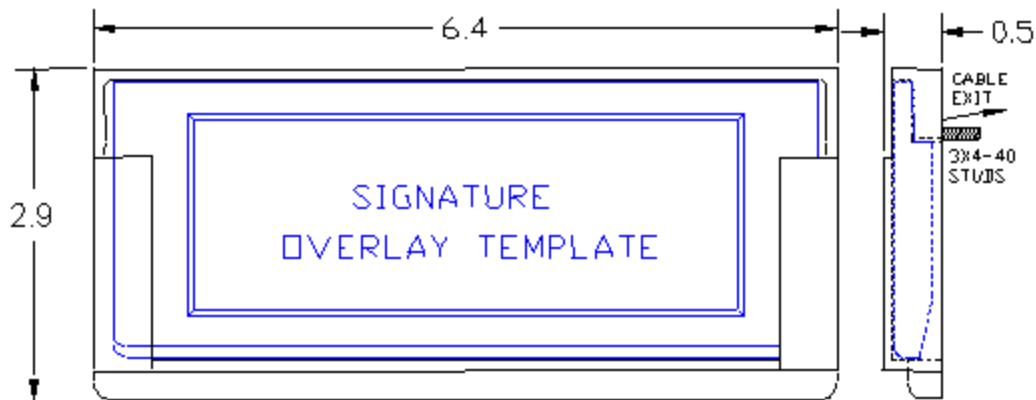

### Kiosk signature capture:

- Check-in stations, Hotels, Trade shows, Car rental
- Employment application booths

## Description

The Topaz Model T-S261-K is a complete signature capture and software application system for the collection, storage, and verification of signatures. It can easily be mounted on kiosks or other public-access equipment, enabling transactions and forms to become paperless. KioskGem allows sbusinesses to take advantage of signature automation in many different fields and systems. The rugged single-board construction and active electromagnetic pen make it possible to enclose the sensor inside the tablet's heavy-duty plastic housing, so it will not be subject to wear in a high-traffic unregulated environment. The self-contained design allows for data and power to be carried through the standard RS-232 (serial) or USB cable. The tamper-resistant Pengem has a non-removable tip and durable 470-pound rated stainless steel wire rope, protecting it from damage or theft. The active electromagnetic pen is designed for a long life of over 30 million tip activation cycles. Extensive software support is available at no extra charge and includes ActiveX, Java, Wintab drivers, and a shared C library for the capture, encryption, formatting, and secure processing of signatures. Topaz SigPlus software is compliant with eSign, state and federal digital signature regulations, by virute of its ability to bind and encrypt the signature to a document or electronic form data. Examples and software plug-ins are bundled with the tablet.

## Mechanical Outline

## Ordering Information
