encryption, compression, and authentication for eCommerce

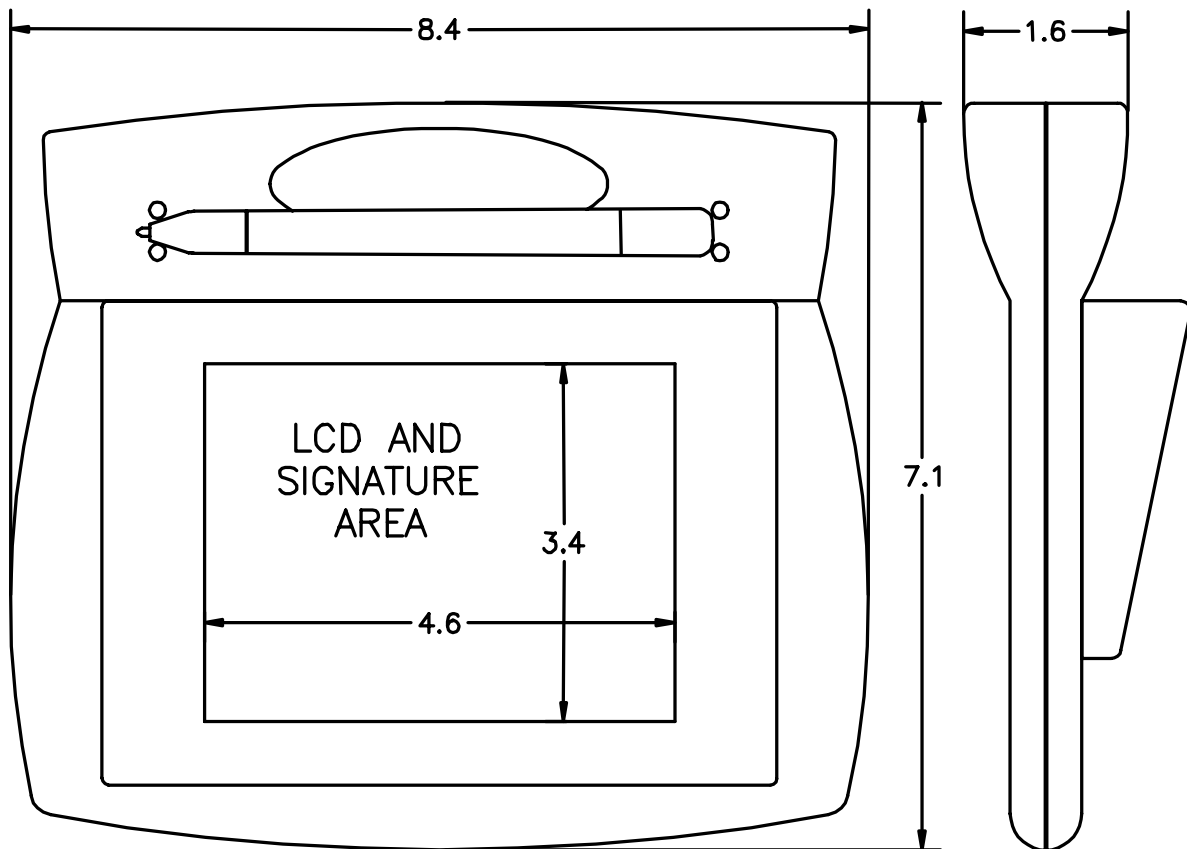

Applications

- **Bank/Credit Union signature enrollment and ID verification**
- **HIPAA applications, medical and hospital sign-in and consent**
- **Insurance enrollment, worksite monitoring**

Description

The Topaz Model T-L766 is a complete and versatile pen-input system for the capture of signatures used in countertop, desktop, or portable applications. The advantage of a Topaz LCD tablet is the ability to capture a digital signature with the ease and familiarity of ink-on-paper by use of "electronic ink" displayed under the pen tip as a user signs. The LCD can also be used to display text and graphics from the host computer and pen-tap "hot spots" allows users to navigate between multiple screens and forms, inputting information or checking preferred options. The large signing area and small size of the LCD 4x5 make it a great tool for capturing signatures in any environment where a large screen for graphics or text are desired. The active electromagnetic pen is designed for a long life of over 30 million tip activation cycles, is tethered to the tablet to prevent misplacement, and when not in use can be kept in attached storage module. Should the plastic pen tip need replacement, it can be removed and a new tip installed without any dis-assembly required. Available software includes an ActiveX control for encryption, compression, and biometric signature verification. Topaz SigPlus™ software is compliant with eSign, state and federal digital signature regulations by virtue of its ability to bind and encrypt the signature to a document or electronic form data. Examples and software plug-ins are bundled with the tablet.
