The Topaz LCD Tablet Finder is an easy to use tool that allows users to determine what COM port their Topaz serial LCD tablet is connected to (does not apply to Topaz HSB/USB tablets). To begin, simply open the tablet finder application.

Next, click on the 'Find Tablet' button. This will begin the tablet finder process. When it is done the results will be displayed in the white window below the 'Find Tablet' window.

These are results from examining a computer where the LCD tablet was not properly connected.

Though the Tablet Finder could not find the tablet, it was able to successfully examine the COM ports and if a Tablet was connected to them. After properly connecting a Topaz LCD tablet, simply click 'Find Tablet' again. This will rerun the application and research the COM ports.

Now the Tablet Finder has located the Topaz LCD tablet on COM4. This is denoted both in the dialogue window that contains the total results of the search, as well as the blue message at the bottom of the window.

**Tablet located on com port 4**
