

Wireless Signature Pad Large Format Series

The Topaz wireless pad enables Topaz BHSB signature pads to be used in an environment with Bluetooth connection.

The unit works with existing Topaz software and just requires a simple Topaz Network Port Driver installer and configuration on the PC to complete the connection.

Communication with the wireless signature pad is bi-directional, allowing for interactive text, graphics, and pen-tap hotspots and checkboxes, in addition to signature capture.

Serving as a virtual serial device, the wireless signature pad is also compatible with remote usage (Citrix, Terminal Server, VDI environments, and more).

Data security is handled by the built-ins standard Bluetooth protocols.
